PREFACE

CANSIM* is Statistics Canada's computerized data bank and information retrieval service. It provides detailed and timely statistical information to economists, sociologists, statisticians, planners, analysts and academics in both the private and public sectors.

The CANSIM central facility is comprised of three database systems which may be accessed from anywhere in Canada by terminal. Business, economic and some social statistics are available in time series format on the Time Series Base. Economic and social statistics are available in cross-sectional format on the Cross-Classified Base (XCL); this format shows data in their multi-dimensional relationship with other data over time. Census Summary Data for a variety of geographic areas are available on the CANSIM Summary Data System (CSDS).

The CANSIM Mini Base is a subset of approximately 25,000 time series of the CANSIM Time Series Base, and is available via terminal from Secondary Distributors**. All Secondary Distributors must provide this subset at a minimum. Secondary Distributors may also obtain additional series from the CANSIM Main Base. Such series are referred to as Mini Base supplementary series. Users are encouraged to discuss obtaining supplementary series with their Secondary distributors. To provide users with an indication of the kinds of data available on the CANSIM Main Base, a Subject Index is included as an appendix to this document.

The CANSIM Mini Base is updated on all working days excluding federal government holidays. It contains a dummy series, databank identification number A100, which users may employ to determine the timeliness of the base. This series contains three datapoints.

- (1) the year, month and day (YYMMDD) of creation of the previous daily update file.
- (2) the year, month and day (YYMMDD) of creation of the current daily update file, and
- (3) the time the update file was loaded on the System of the Secondary Distributor.

For all series on the CANSIM Mini Base, the updates will be available within one working day of their release on the CANSIM Main Base. Secondary Distributors disseminate CANSIM data according to Statistics Canada guidelines and offer users a choice of software, telecommunication networks and technical support services.

* CANSIM is an Official Mark of Statistics Canada.

** A complete list of Secondary Distributors is on the following page. When publishing any statistical data or text retrieved from CANSIM, the following credit should be used:

GUIDE TO USE OF THE TABLE OF CONTENTS, INDEX, AND DIRECTORY

An intrinsic property of the CANSIM Mini Base is that the data are organized according to a hierarchical structure - the highest level of which is the data matrix. Each of the matrices on the Mini Base contains individual series, which are related to each other in some coherent fashion. Each series represents a concept or variable for which data are stored across time.

The Mini Base Series Directory, the large-volume, series level presentation of the database content, has as its primary level of aggregation the data matrix. Within it, matrices are simply ordered in ascending sequence and not placed in the context of subject matter categories. The Mini Base Series Directory outlines, for each matrix, the Matrix Title and Note and, when applicable, the source publication for the data. For each constituent series, it provides the CANSIM series identification number, the databank number, start date, security status, and termination and metric conversion indicators-all in a format designed for easy reference.

The Index to the Mini Base outlines the contents of the Directory by these matrices - specifically, as they are organized by twelve broad subject categories. The link between the Index and the Main Base Series Directory is the matrix number.

The Table of Contents lists the twelve subject categories of the Index.

To determine whether data of interest are contained in the CANSIM Mini Base, the user is encouraged to begin with a review of the Table of Contents. If the Table of Contents provides evidence that data of interest may be available, the user is directed to the pages of the Index which outline the matrices that might apply. Subsequently, matrices which are identified as warranting investigation of their component time series would form the basis for referring to the CANSIM Mini Base Series Directory.

Example 1:

Finding CANSIM Mini Base Series

You wish to obtain monthly data for the Consumer Price Index for Toronto and Montreal. You would begin with the Table of Contents for the Mini Base. From there you would establish that Section II of the Index contains data on Prices and Price Indexes and that Section II can be found on page 2. By turning to this page of the Index you would determine that matrices 1923 through 1940 contain monthly Consumer Price Indexes for Canadian cities and that matrices 1930 and 1928 respectively contain city indexes for Toronto and Montreal. Finally, by turning to Matrices 1930 and 1928 in the Mini Base Series Directory you would be able to review the content of each of the matrices and determine the precise series which would suit your needs.

Example 2: Finding CANSIM Mini Base Supplementary Series

A more complex example would have you seeking data about the production of Asphalt Roofing. A review of the Table of Contents would direct you to Section IV of the Index - Manufacturing. However, Section IV contains no reference to the production of Asphalt Roofing. You would then refer to the Appendix C wherein a Subject Index is presented. There you determine that CANSIM does contain data on Asphalt Roofing Manufacturer and that it resides in Matrices 32, 7598, 5488 of the Cansim Main Base.

You must now contact your Secondary Distributor and discuss the potential of gaining access to Matrices 32, 7598, 5488 (or a subset thereof) via CANSIM Mini Base Supplementary Series service.

II. PRICES AND PRICE INDEXES

CONSUMER PRICE INDEX-UPDATING BASED ON 1982 EXPENDITURES

Beginning with January 1985 the Consumer Price Index (CPI) will be compiled using updated weights obtained from the 1982 Family Expenditure Survey. These weights will replace those derived from the 1978 Survey which were used in the CPI during the period April 1982 to December 1984.

To maintain the continuity of the series for the All-items index for Canada and for published urban centres as well as for other indexes representing varying levels of aggregation, the indexes produced using the 1982 weights are linked (or chained) to their respective counterparts obtained from the 1978 weights. December 1984 marks the link month, or the point in time, in which comparable indexes are merged.

The time reference base continues to be 1981=100 except in cases of indexes that were initiated after that time. In particular indexes for Whitehorse and Yellowknife will continue to be reported on a March 1982=100 time base. Victoria, the newest urban centre for which data will be published, will have a time base of December 1984=100.

Further details on the Consumer Price Index and related information may be obtained by dialling 613-990-9606 or by writing to the Unit Head, Information and Current Analysis Unit, Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6.

A. National Wealth and Capital Stock

1. 1970 SIC

These series represent annual estimates of the stocks and flows of fixed non-residential capital in Canada beginning with the year 1926. The data from 1926 are published in Fixed Capital Flows and Stocks, (13-568), occasional. Updates for the five most recent years are published in Fixed Capital Flows and Stocks, (13-211), annual.

The perpetual inventory method which underlies the present estimates starts with annual investment expenditures and estimates of the service lives of the assets. The capital stock estimates for a given year are obtained by accumulating past investment expenditures and adjusting them for the value of investment that has been used up (gross stocks) or adjusting them for the gradual wear and tear and the obsolescence they undergo during the time they are used (net stocks).

A comprehensive description of the perpetual inventory method is given in Fixed Capital Flows of the perpetual inventory method is given in Fixed Capital Flows and Stock - Manufacturing Canada 1926-1960: Methodology (13-522), Occasional.

The series are given by major industries according to the 1970 S.I.C., both in constant (1971) and current dollar valuation covering the following detailed types of components:

1. Building Construction
2. Engineering Construction
3. Machinery and Equipment
4. Capital Items Charged to Operating Expenses
5. Total Components

The component series are presented for the following categories of data:

1. Gross Fixed Capital Formation (GFCF)
2. Net Fixed Capital Formation (NFCF)
3. Capital Consumption Allowances (CCA)
4. Mid-Year Gross Stock (MYGS)
5. Mid-Year Net Stock (MYNS)
6. End Year Gross Stock (EYGS)
7. End Year Net Stock (EYNS)
8. Discards

Note:

The mnemonics appearing at the end of the series title of some 650 series in the Capital Stocks data block, serve to identify the component series of the CANDIDE model which is an undertaking of the Economic Council of Canada.

B. Capacity Utilization Rates In Canadian Manufacturing

The capacity utilization rates are given by major group according to the 1970 Standard Industrial Classification, by quarter from 1961.

The definition of capacity in this procedure is the maximum output obtainable under normal technological and market conditions.

The methodology used to produce these indexes is based on a comparison of the actual output of an industry during a certain time period with the estimated capacity output during that period.

The estimated capacity output is based on a capacity capital-output ratio derived from the industry's gross stock of fixed capital, measured in 1971 dollars. These capital stock estimates are produced by the National Wealth and Capital Stock Section of The Construction Division of Statistics Canada.

For concepts and detailed methodology, refer to Utilization Rates in Canadian Manufacturing, (31-003), Quarterly.

These indexes are available for the following list of industry levels:

1. Food and Beverages
2. Tobacco
3. Rubber and Plastics Products Industries

UNEMPLOYMENT INSURANCE STATISTICS, INITIAL AND RENEWAL CLAIMS RECEIVED, BY PROVINCE AND MONTH - RELEASED 60 DAYS AFTER THE REFERENCE MONTH.

UNEMPLOYMENT INSURANCE STATISTICS, 73-001 STC.

THE DISTINCTION BETWEEN "INITIAL" AND "RENEWAL" CLAIMS IS MAINLY ADMINISTRATIVE. THE CLAIM IS CATEGORIZED AS "INITIAL" IF IT IS A NEW ONE. HOWEVER, IF THE COMMISSION RECORDS INDICATE THAT BENEFIT RIGHTS ARE IN EXISTENCE THE CLAIMANT IS GIVEN A CHOICE TO CONTINUE THE CLAIM, A "RENEWAL", OR TO START A NEW ONE, THAT IS, ACTIVATE AN "INITIAL" CLAIM. FOR FURTHER DETAILS, SEE TECHNICAL NOTES IN CAT. 73-2025.

This document is a subject index to the matrices which comprise the CANSIM Time Series Main Base. Throughout, main topics are ordered in alphabetic sequence, with sub-groupings such as geography, industry, or commodity breakdowns indented for easy reference. The user should note that investigation of these sub-groups, in addition to the main alphabetic citations, should provide exhaustive references for a given topic or group of topics. For example, direct citations exist for GRAIN, but this item may also be found as a component of major topics such as Balance Sheet data and Concentration by Control statistics. Indication that a matrix contains some series on the Minibase is given by the letter 'm' which appears after the matrix number.

In the development of this index, an attempt has been made to extract essential keywords from the matrix titles, as well as to offer, in some instances, a broad indication of series-level content. Users are cautioned not to rely totally on this document, however, and should also refer to the structured, survey/collection oriented index now in the Minibase and Main Base Series Directories. Further, due to its experimental nature, there will be room for improvement. Comments or suggestions about items not referenced, or about the over-all design of the index, are welcome.
